PROFESSIONAL SUMMARY

Full-stack developer and computer engineering student with experience building scalable, production-oriented web applications and backend systems. Skilled in developing RESTful APIs with Python, FastAPI and PostgreSQL as well as responsive frontends with React, Next.js and TypeScript. Strong foundation in database design, authentication, caching, API architecture and containerized deployment with Docker.

WORK EXPERIENCE

Frontend Developer Intern

Intersect Info Developers

May 2026 – Present

Kathmandu, Nepal

- Built 8 responsive mobile-first pages for the Kummayak Rural Municipality portal using Next.js, TypeScript, and Tailwind CSS.
- Integrated REST API responses to render dynamic notices and service data.

PROJECTS

Flight Booking System

FastAPI, PostgreSQL, Redis, Docker, GitHub Actions, AWS

- Designed a normalized 12-table PostgreSQL schema with SQLAlchemy and Alembic migrations.
- Built 28 REST endpoints for flight search, booking, cancellation, authentication, and account management.
- Implemented JWT authentication, admin/customer role-based access, and Google OAuth.
- Cached flight searches with Redis, reducing repeated database queries and upstream API requests.
- Containerized with Docker and automated Pytest testing and AWS EC2 deployment through GitHub Actions.

E-KYC Verification System

FastAPI, Python, React, OCR, ArcFace

- Built automated identity verification for Nepali citizenship documents using OCR and computer vision.
- Extracted and structured seven identity fields for verification and validation.
- Verified faces using ArcFace embeddings to compare live images with document photos.
- Integrated active/passive liveness detection and document-tampering checks to improve reliability.
- Built a React interface for document submission, identity verification, and results.

Nepal Stock Market Data System

Python, FastAPI, PostgreSQL, XGBoost

- Built a pipeline collecting NEPSE price history, corporate actions, and floorsheet transactions.
- Designed a normalized PostgreSQL schema for storing and querying historical market data.
- Built 16 FastAPI endpoints for market, company, and historical trading data.
- Engineered five technical indicators and trained XGBoost to classify stocks as buy, hold, or sell.

SKILLS

Languages

Python, TypeScript, SQL

Back-End & Data

FastAPI, Node.js, PostgreSQL, Redis, Kafka

Front-End

React, Next.js, Tailwind CSS

Cloud & DevOps

AWS, Docker, GitHub Actions, Git

EDUCATION

Bachelor in Computer Engineering

Thapathali Campus, IOE, Tribhuvan University

2023 – Present

Kathmandu, Nepal
